#### Potential Health Effects:

**ACUTE (short term): see Section 8 for exposure controls**

#### Relevant Route(s) of Exposure:

Skin contact.

#### Inhalation:

Inhalation is not expected with normal use.

Extreme heating (>300°C) of the product can release irritating vapors. Symptoms of irritation include coughing, sneezing, nasal discharge, headache, hoarseness and pain in the upper respiratory tract.

Products of thermal decomposition of fluorocarbon monomers and polymers can produce a condition known as "polymer-fume fever"; the symptoms are flu-like (chills, headache and fever) with chest tightness and mild cough; onset of symptoms may be delayed.

**Ingestion:** Not an applicable route of occupational exposure. Components of the product have low oral toxicity.

**Skin:** No health effects expected with normal use of the product.

**Eye:** Direct eye contact may cause temporary irritation as a foreign object in the eye. Symptoms of irritation include redness, swelling, pain and blurred or hazy vision.

## SAFETY DATA SHEET

### Section 2: Hazards Identification, continued

	CHRONIC (long term): see Section 11 for additional toxicological data  Prolonged or repeated skin contact may cause dermatitis in some individuals.
Medical Conditions Aggravated by Exposure:	Skin contact may aggravate an existing dermatitis.
Interactions With Other Chemicals:	Cigarette smoking is a common means of creating exposure to the products of decomposition of fluorocarbon monomers and polymers. Fluorocarbons may be deposited on cigarettes from the air or from workers' fingers. As a cigarette is smoked, fluorocarbons are then burned and the products of decomposition are inhaled with the cigarette smoke.
Potential Environmental Effects:	Not available
